## TECHNICAL DATA SHEET

### Low NOx Benchmark Gas Fired Hot Water Boiler System

The AERCO Benchmark 2.0 Low NOx (BMK2.0LN) Water Boiler is designed for condensing application in any closed loop hydronic system. It delivers 20:1 burner turndown to match energy input directly to fluctuating system loads to yield the highest possible seasonal efficiencies. As illustrated below, the unit's operating efficiency actually increases as the load decreases. It can achieve 99+% efficiency when supplied with 60°F return water while firing at minimum input.

To minimize emissions, the BMK2.0LN is fitted with a low NOx burner whose emissions will consistently measure <20 ppm of NOx corrected to 3% excess oxygen at all firing rates. Certified by the SCAQMD and TCEQ in its class, the fully modulating burner also maintains AERCO standards for energy efficiency, longevity, reliability and construction quality.

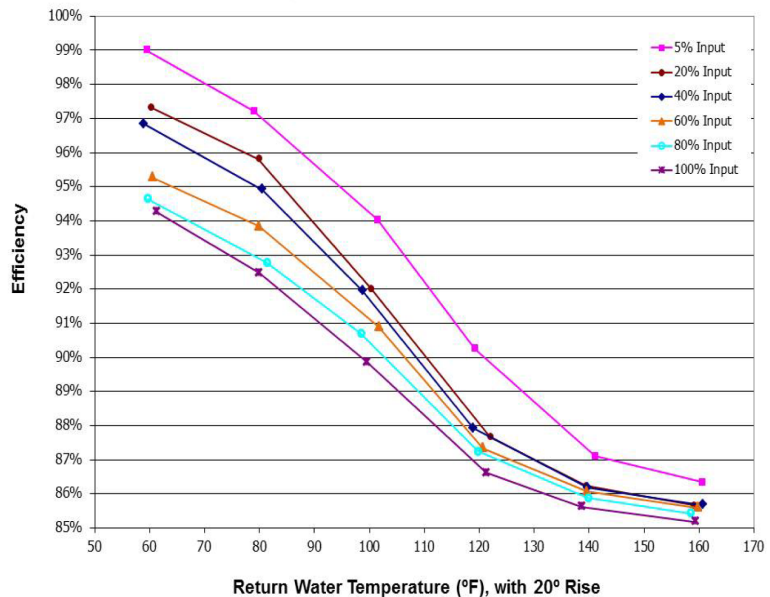

The BMK2.0LN can be used singly or in modular arrangements and offers selectable modes of operation. In addition to controlling the boiler according to a constant set point, indoor/outdoor reset schedule or 4-20mA signal, one or more can be integrated via Modbus communications protocol to AERCO's multiple boiler management system (BMS II) or a facility-wide Energy Management or Building Automation System.

### THERMAL EFFICIENCY

Comprehensive tests are being conducted to confirm the unit's efficiency over its entire 100,000 to 2,000,000 BTU/hr. operating range for a variety of operating conditions. The initial boundary tests indicate that efficiency up to 99.3% can be achieved when the unit operates at its lowest firing rate (5% input) with 60°F inlet water temperature. Even at full fire (100% input) with 160°F inlet water temperature, the BMK2.0LN delivers 85.3% efficiency.
